Modern floor coating systems must meet the highest demands. In addition to a vast range of technical properties that ensure functionality, the visual/aesthetic aspect is of increasing importance in public areas that need to make a good, representative impression. Maintaining the technical and visual brilliance requires continuous cleaning and care routines. The use of high-tech materials and nano technology in MC-DUR 2095 has resulted in the development of a true surface enhancer that combines surface brilliance with significantly reduced cleaning efforts.

MC-DUR 2095 – the surface enhancement for your flooring

Not only will your floor be visually more appealing when you use the surface enhancement from MC, but you will at the same time also reduce your floor cleaning requirements and cleaning costs. Soiling can take many forms: whether food stuffs, greases, or dirt carried in from the road, even chewing gum – MC-DUR 2095 gives permanent protection and simplifies the cleaning process. The test result in the MPI Dirt-Test: cleanability “excellent”!

Qualities

- Very good bonding
- High surface hardness
- Outstanding application properties
- Economical consumption
- Diffusion-open
- UV-stable
- Enormous cleanability
- Individual design possibilities

Your advantage

- Surfaces of visual brilliance
- Permanent protection of your refined floors
- Cost-savings through drastically reduced cleaning requirements
- Can also be used for diffusion-open coating systems
- Highly variable through extensive colour spectrum as well as matt or glossy surface finishes

Perfect protection in three varieties

Select the best solution from three varieties for the enhancement of your floor surfaces. A sophisticated matt finish is achieved with MC-DUR 2095 M. For a rather glossy appearance pick MC-DUR 2095 G, while MC-DUR 2095 F allows you to combine a lasting surface enhancement with colour design excellence.
