

MC-Injekt 2300 NV

Flexible waterproofing and lasting repair

- Optimal application time
- Accelerated waterproofing when water contact is present
- Safe handling through mixing ratio of 3:1
- Highly elastic and permanently proof

Waterproofing without compromise

MC-Injekt 2300 NV

Cracks and cavities in the building structure have to be waterproofed promptly in order to avoid extensive consequential damages. Choose the safest way in sealing injections; the elastomer resin combination MC-Injekt 2300 NV protects your building structures permanently and reliably. After expert grouting under pressure the damaged spot is protected from water and many chemicals. Take advantage of years of experience by a global leader in the area of building injections when waterproofing your structures.

MC-Injekt 2300 NV – flexible waterproofing and lasting repair

Countless international references testify: MC injection systems offer you reliability that lasts. Since the early seventies building principals and contractors have put their trust in MC-Bauchemie's long-standing experience and Know How. After more than three decades the tunnel sections of Munich's underground are a good example and proof of the durability of elastomer resin combinations. Simulation tests have confirmed an even greater life-span.

MC-Injekt 2300 NV – the low-viscosity power package

- Low-viscosity elastomer resin, approved by building authorities
- Fills even the finest cracks right down to their roots
- Provides a long application time
- Reacts quickly under contact with water inside the building element
- Outstanding bonding with building materials
- 100% elastic
- Highly durable
- Extremely environmentally-friendly
- Approved for applications that are in contact with ground or drinking water

Thanks to a long potlife a reliable application is also possible with single-component pumps.

MC-Injekt 2300 NV can be applied easily and reliably due to its enormously low viscosity. Even the finest cracks are filled right down to their roots. In addition, the elastomer resin offers a long application time. However, should MC-Injekt 2300 NV encounter water within the building element, reaction time accelerates - guaranteed waterproofing success at the right spot and the right time!
