The metal manufacturing industry of today is required to provide the highest quality standards. An extensive variety of products for a diverse range of applications calls for highly differentiated production processes. When choosing a suitable industrial floor you are therefore confronted by an extensive list of stresses, for example stress from heavy duty rollers, the shifting of pallet cages or from falling parts. In addition to this there may be potential stress from a multitude of chemicals. Last but not least you have to ensure the flooring is slip resistant. MC's Industrial Flooring Concept provides certified safety at the highest level for the metal manufacturing industry. An ideal system solution even for a combination of different stress factors.

Protection, refinement and asset preservation of your industrial flooring

MC-DUR 1200 The Coating System for the Metal Manufacturing Industry

System Benefits

- highly wear-resistant
- highly resistant to mechanical stress
- slip-resistance adjustable
- trafficable
- flame resistant
- conductivity adjustable
- easy to clean
- great colour variety
- waterproof
- solvent-free
- seamless, level and pore-free

Specific requirements demand specific solutions!

The internal transport of heavy duty loads subjects your industrial flooring to extra grinding as well as impact loading stresses. In these circumstances go for a thick-layered, extremely hard-wearing hybrid flooring system – that's going to last! You have to avoid long production downtime during modernisation, repair or conversion works? Take advantage of the time-saving, rapidly hardening floor coating that can be used the next day!
