ombran W/ombran IW

Drains and sewers suffer from unwanted water infiltration and ex filtration

Susceptible leakage points are at seals, connections and gaskets as well as general seepage over wider areas. This results in the system admitting water from the surrounding ground and or pollution of the groundwater. Sewers become blocked or ineffective and operating and maintenance costs escalate.

ombran W / IW is a simple and safe solution. Whether the leaks are at isolated points or over a wide area, pressurised or un pressurised, even submerged, application of ombran W / IW is the solution.

ombran W: areas of application
● sealing of pipe gaskets
● sealing of joints
● sealing of sewers, pipes, drains
● sealing under water
● sealing potable water systems
ombran IW: areas of application
● surface sealing of concrete and brickwork
● surface sealing of wall / base connections
● surface sealing of sewers, pipes, drains
● surface sealing potable water systems

Isolated and general leakage points

ombran W / ombran IW – instant and reliable sealing. Drains and sewers are sealed while still in operation.

Down-time becomes obsolete.

Product and application advantages

ombran W Fast setting mortar for point leaks

- instant and durable stopping of point leaks
- expansive
- impermeable to water
- resistant to water under pressure
- no shrink
- sets in 1 – 2 minutes
- ready to use
- chloride free

ombran IW Fast setting mortar for surface sealing

- surface sealing of large areas
- expansive
- impermeable to water
- no shrink
- rapid setting
- ready to use
- chloride free
