Quality and competence for any standard

- Additives/Admixtures for concrete and mortar
- Mould release agents and concrete curing agents
- Concrete Cosmetics
- Grouting compounds
- Building water proofing
- Oxal: Old and historic building restoration
- Joint sealants

High-end product systems and competent services from one source: As practice-oriented developer of innovative materials MC offers its customers additionally the quality of advice that rests on many years of experience in the area of concrete improvement and concrete curing as well as concrete repair. Talk to us – we find your solution.

Know-how is the basis for competent services: Practical experience delivers results for practical application

There's a good reason behind MC's successful development of products and systems that are made for practise: An above average percentage of employees, 10% in fact, work in the area of research and development and application technology, shaping the worldwide exchange of experiences with our customers. This proximity to our customers becomes possible through more than 40 international subsidiaries in over 25 countries. **The benefit to our customers: Maximum productivity and cost-efficiency through locally provided advice.**

MC maintains close contacts and continuous dialogue with leading European polytechnics and universities that research construction materials and their durability. We mentor degree dissertations and PhD theses on construction material technological research proposals. Our engineers and chemists play a significant part in numerous EU research projects, such as research about the durability of concrete.

Tomorrows technologies are shaped by the solutions developed at MC.

New perspectives through innovative products and services

For over 40 years the name MC has been synonymous with superior products and systems, benefiting the precast and ready-mix concrete industries, planners, architects, building patrons and construction companies all over the world. Our mission to develop practice-oriented and cost-effective solutions has produced a wealth of innovations and has set new benchmarks for the construction industry.

High-end construction chemical products, systems and services that create new perspectives in contemporary construction: MC research & development and customer proximity as the basis for maximum productivity.

You can find an up-to-date overview of our international subsidiaries, products and product systems and our complete service spectrum on our website: www.mc-bauchemie.com

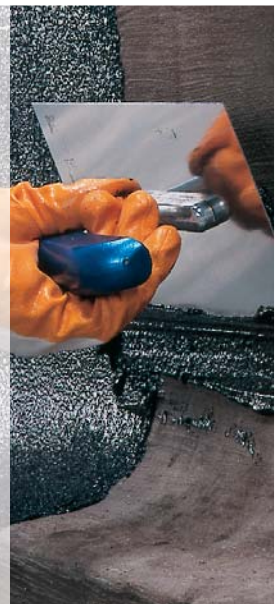

Take a look at our site – We give concrete a new perspective.

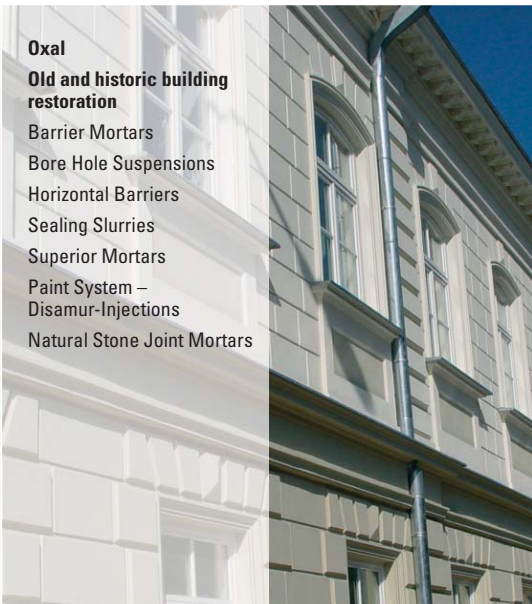

Innovative products and exceptional services for all tasks of concrete optimisation

The services of MC for the ready-mix concrete industry, the precast concrete industry and concrete manufacturers range from concrete technological advice to preliminary tests in regional construction material laboratories, assistance with suitability tests to assistance with the set-up of dosing plants for concrete additives.

Waterproofing
 Polymer-Modified Bituminous Waterproofing (KMB)
 One- and two-component Technologies
 Hand and Spray Technologies
 Bituminous Protection Coats
 Sealant and Joint Tapes
 Sealing Slurries

Oxal
Old and historic building restoration
 Barrier Mortars
 Bore Hole Suspensions
 Horizontal Barriers
 Sealing Slurries
 Superior Mortars
 Paint System – Disamur-Injections
 Natural Stone Joint Mortars

Market-driven product systems and services from new construction to building repairs

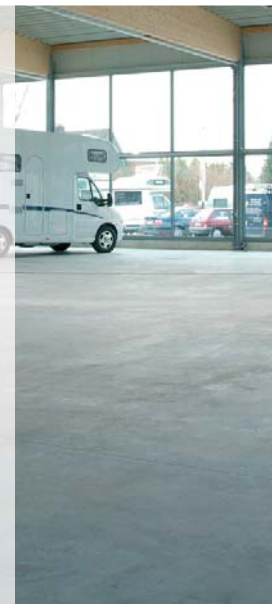

Tailored to the requirements of planners, construction companies and applicators MC not only offers specific product solutions that produce an optimal application result: The assistance, for instance with tender-specific questions, analysis services in the area of repairs and restorations or competent advice providing individual product solutions offer MC customers competitive advantages based on MC's Know-how headstart.

Seamless services from the drawing board to working on-site

Globally over 1,500 competent and committed employees realise service concepts that by far exceed normal standards on a daily basis. The result for our customers: reliable results through economic systems that fulfil the highest requirements.

- Advice delivered locally through experienced technologists and technicians
- Training provision for products and product systems
- Specialist technical/legal seminars
- Advice on all standard matters e.g. concrete standard EN 206-1
