

BUILDING CHEMICAL SUPPLIES

Our capabilities

Building Chemical Supplies Australia

World leading experts in concrete technology, chemical applications, repair and protection within the construction, civil infrastructure, tunneling, utilities and rail sectors.

BCS provides:

- waterproof membranes, injection and sealing solutions
- soil conditioning and stabilisation
- backfill grouts and mortars
- concrete admixtures, release agents and repair materials
- fire-resistant concrete repair mortars, cementitious and chemical surface protection systems.

The best products, unmatched expertise, unblemished results

Our mission

Building Chemical Supplies provides engineered, customer-specific solutions using construction chemicals of the highest quality and the latest technical application equipment to obtain outstanding results for our clients.

Our philosophy

BCS believes successful project delivery relies on understanding the unique requirements of the project, the seamless integration of quality materials, experienced and well-trained applicators, and sophisticated specialist equipment.

Our dedicated team of Australia-wide in-house engineers and technical staff manages these qualities to ensure desired project outcomes are consistently achieved.

Our values

We listen carefully to your needs, to then provide tailored, innovative and cost-effective services.

We believe, strong business outcomes can be achieved through positive relationships based on trust and loyalty.

Our performance

BCS constantly reviews its performance to assess how and where we can add real value to project outcomes.

We deliver proven project management best practice with an extensive team of in-house project administrators, engineers, qualified and technical staff.

We deliver comprehensive solutions to meet individual client needs.

Our dedicated staff provides advice and expertise based on solid engineering training, experience and the latest technologies.

Our unique qualities

We provide engineered solutions using quality construction chemicals, proven application techniques and specialist equipment.

All BCS materials and equipment are imported from world-leading industry partners, MC-Bauchemie, construction chemicals, and Desoi, specialist application equipment, of Germany.

A strong relationship with these companies enables our staff to access the latest innovations and international project experience.

Our people

We deliver excellent results by employing exceptional, qualified and approachable people who deliver outcomes in a safe and efficient manner.

Every member of staff is trained to international standards and, naturally, operates in compliance with all Australian codes and standards.

Team member training

Every BCS team member offers an internationally recognised qualification, proving competence in IRP, the injection, repair and protection of concrete and reinforced concrete structures.

The course incorporates best practice methodologies and the latest developments in the building chemicals market.

It also provides an advanced level of knowledge and training.

IRP certification is recognised as an international benchmark.

Safety, quality and the environment

These are core values to how BCS operates. We have developed site and material specific risk and environmental management plans to achieve quality outcomes for our clients, the environment and the community.

We're flattered that some of our best clients choose us second!

Unfortunately, many companies choose only the lowest quote. Something our's rarely is!

On a recent large tunneling project, water was springing from somewhere it shouldn't have.

It was rising to unmanageable levels.

The original contractor was soon running out of answers. So the client rang BCS.

We attended with our unique products and technical expertise.

Very soon, problem solved.

We might often be a little dearer, initially. But always cheaper in the long run!

Our equipment, products and people are simply the best in the industry.

[Look at this video of our product in action against our competitors'. You can immediately see the benefits of our product and the lack of benefits in all others!](#)

We offer a guaranteed solution, every time.

BCS

Building Chemical Supplies Australia

BCS Australia is the exclusive national distributor and solutions provider for both MC-Bauchemie construction and injection chemicals and Desoi injection pumps, packers and consumables.

With more than 15 years' experience in tunneling and infrastructure markets, BCS provides a collaborative approach, supporting best practice techniques and guidance from the project build phase to completion and maintenance programs.

Professional services

BCS also provides:

- site inspections and reports
- professionally qualified and prepared material specifications and proposals
- method statements, inspection and test plans
- highly specialised technicians for product training and project-based supervision.

BCS global partners

MC-Bauchemie GmbH

Since 1961, MC-Bauchemie GmbH has grown to be Germany's largest private chemical company and market leader in Europe.

With over 40 offices in 40 countries, MC's project experience provides a vast resource to us.

MC has over 2500 staff worldwide and over 200 staff in research and development, continuously developing and innovating new products.

MC complies with DIN ISO 9001 and 14000 as well as the European REACH system which ensures the safe use of chemicals within the EU.

Desoi GmbH

Established in 1979 and now operating in over 20 countries, Desoi GmbH manufactures specialist equipment for tunneling, civil and mining industries.

Its product range includes both high and low-pressure injection pumps for resins and premium cementitious-based products and a large range of specialist injection systems.

Desoi also offers mixing and spraying equipment.

BCS tunneling project history

BCS has completed the successful repair, remediation and maintenance on such projects as:

- CLEM7
- Airport link
- Legacy Way
- NorthConnex
- WestConnex
- New M5
- Lane Cove
- Sydney Metro
- Melbourne Metro tunnels.
